

SOUNDERS

KAC Sounders are available in two versions, three-tone or fourteen-tone. All sounders operate at 9-33 VDC, optimised for use at 12 and 24 volts. Typical current draw is 15mA at 800Hz for 103dB(A) output at 24VDC. All products have a volume control allowing adjustment to -15dB from maximum output.

The sounders have a distinctive low profile shape which is acoustically very efficient, producing high sound output at low current levels. The shape provides a wide angle uniform sound distribution providing good audibility in all directions.

The sounders are of rugged construction with solid state electronics providing high reliability and stable performance. They are compatible with three types of base, an IP44 low profile base or surface bases sealed to IP55 or IP66.
